

YOUTH REVIVAL

Restore your skin to its prime with IDS Clinic's Age Reversal Experience, designed to smoothen, tighten, and lift – surgery-free.

It's never too late to hit 'refresh' on 2020, and the same goes for your skin. As we embrace the new normal with a revived outlook, IDS Clinic promises a rejuvenated complexion to match. The aesthetic clinic's latest programme helps you put your best face forward, erasing all signs of weariness caused by stress, time, and gravity while giving slack skin a youthful lift without painful surgical procedures.

TRIPLE THREAT: IDS CLINIC AGE REVERSAL EXPERIENCE

IDS Clinic's latest Age Reversal Experience teams up three complementary non-surgical treatments to target three main areas of the face: the upper face (forehead, glabellar lines between the eyebrows, and temples), eye area (from the eyebrows to the undereye), and lower face (from the undereye to the jaw). An additional treatment area from the jawline to the collarbone (neck) can also be addressed, making this comprehensive 3+1 programme fully customisable to target your specific concerns and trouble zones.

For Forehead
IDS MaskTox™ with Botox

For the Eye Area
IDS REJURANation I-Lift
with Rejuran I

For the Face & Neck
IDS Perfect 10 Lift
with Profhilo

FOR THE UPPER FACE

**IDS
MaskTox™
with Botox**

Price: \$499 before GST

A product of these extraordinary times, the inventive IDS MaskTox™ is a portmanteau of “Mask” and “Botox”. As its name suggests, this procedure rejuvenates the upper half of your face – the part that is most visible to the world during these mask-wearing months. Harnessing the powers of Botox to smoothen fine lines and wrinkles on the forehead and frown lines in between the brows, the injectable treatment works by blocking the release of chemical signals from the nerve to the muscle, making muscles unable to contract. Completed in just 15 minutes after a medical consultation, the quick procedure results in a natural, tightened appearance that can last up to six months.

A review is usually done two weeks after the first injection and adjustments are made if required. There is no downtime, making this a perfect lunchtime treatment. As this is not a one-time fix, two to three treatments a year are recommended.

FOR THE EYE AREA

IDS REJURANation I-Lift with Rejuran I

**Price: \$1,680 before GST
for 3 rounds of treatment**

This treatment uses injectables to keep your peepers looking bright and lifted even without makeup. With its formulation derived from salmon DNA, Rejuran I works a treat in reducing dark undereye circles and smoothing out crow's feet by improving skin elasticity. Its liquid texture makes it perfect for the periorbital region, allowing for it to be injected into the delicate area without causing permanent bumps.

Performed by injecting small amounts of product around the eyes or using a cannula to distribute the product around the eyes, the procedure only takes 15 minutes to complete and boasts minimal discomfort. For optimal results, the treatment is carried out over three sessions within four months.

FOR THE FACE & NECK

IDS Perfect 10 Lift with Profhilo

**Price: \$2,000 before GST for
2 sessions, spaced a month apart.**

In just 10 minutes and 10 injection points, you can get 10 months of hydrated and smooth skin. This miracle treatment uses Profhilo, the first revolutionary bio-remodelling 'injectable skincare' that addresses skin laxity and signs of ageing. Unlike traditional skin boosters that require at least 100 injection points all over the face to deliver hydration to the skin, IDS' Perfect 10 Lift uses only five injection points on either side of the face so the treatment is fast and virtually pain-free – no numbing cream pre-procedure required!

Formulated with the patented NAHYCO Hybrid Technology, Profhilo delivers stabilised hyaluronic acid into skin, which in turn bio-stimulates collagen, elastin, and adipocyte (fat) stem cells that are lost through skin ageing. Skin not only becomes firmer, more lifted and tightened, but also more plump and hydrated. For those looking for additional coverage, this treatment can also be extended to the neck with an additional 10 injection points. The treatment is designed to be completed over two sessions, one month apart.

Did you know?

The revolutionary Profhilo combines the high and low molecule weight of hyaluronic acid in one syringe to address skin laxity, aid tissue repair, and boost overall skin quality and hydration.

High molecule weight hyaluronic acid provides the structure and foundation to help lift skin and **low molecule weight hyaluronic acid** boosts hydration to improve skin texture and suppleness.

About IDS

Opened in 2014, the clinic has been conceived with one end in mind - to offer innovative and effective treatments at affordable and reasonable prices, without sacrificing quality and professionalism. The IDS Clinic is helmed by Dr SK Tan whose 40 years of clinical and research experience brings zeal and commitment to his customers. The clinic also offers products from IDS Skincare that are designed to address the most common skin problems and formulated to deliver maximum efficacy.

Just this year, IDS launched its biggest and first flagship outlet at International Building that separately houses IDS Aesthetics, IDS Skincare, and IDS Clinic in the heart of Singapore's retail belt, Orchard Road.

You can find **IDS Clinic** at International Building, #02-02, and Novena Specialist Center, #05-09.
